

# Closing Care Gaps for Chronic Care Management and Preventive Care

## Problem

Addressing care gaps for chronic conditions and preventive care is crucial for ensuring adherence to performance metrics, particularly those associated with payment incentives.

## Solution

Utilize analytics to identify specific performance metrics that have poor adherence, and gain insights into specific clinics, providers, and patient populations that require focused improvement efforts.

## **Data**

- Patient demographics
- Primary care providers & clinics
- Procedures
- Labs
- Diagnoses
- Vital signs
- Medications
- Appointment history and future scheduling
- Clinical data including visits

## **Reports**

- Track performance on chronic and preventive care metrics
- Characterize the performance of clinics and providers
- Identify patient populations with low adherence
- Track the impact of interventions on closing gaps.

## **Clinical and Administrative Decision Making:**

### **Clinical**

Identify opportunities to close care gaps, tailor treatment plans, and improve care coordination.

### **Administrative**

Allocate resources to address care gaps, optimize staffing, and improve care quality.

## Expected Outcomes

Reduced hospitalization rates and emergency department visits.

Improved patient outcomes & quality of life for individuals with chronic conditions.

Lower healthcare costs associated with chronic disease management.

Improved preventive screening rates

Seamless Care,  
Healthier Lives..
